**Subject:** superfund cleanup

the EPA needs to choose Alternative G. They need to hold the PRPs responsible for contaminating the river and surrounding land and air with 185 different toxins. Monitoring of the super fund site, all 11 miles, needs to start now and continue past the completion of the clean up. They need to implement habitat restoration and that also should be monitored for years after to make sure that the area stays viable and animals and plants continue to live there. They also should not pass the cost onto the rate payers or tax payers. The PRPs created this mess and they need to fix it.
